Sunshine on my shoulders makes me happy!

June

Unprotected sun exposure leads to wrinkles and damage to the skin and is also blamed for skin and lip cancers. Look for sunscreen with an SPF of at least 15 and UVA and UVB protection.

What is SPF? The SPF number tells you how long you can stay in the sun before getting burned. If you normally start to burn after 15 minutes of sun exposure, an SPF 15 product will let you stay in the sun for approximately 15 times longer (or 3 1/2 hours) without burning. Be sure to reapply your sunscreen often when you are in the sun, excessive sweating and after swimming. Happy Summer!
